ERNS REPORT FOR 0800 11/01/2018 TO 0800 11/02/2018

Mobilizations During Current Reporting Period

No Federal On-Scene Coordinators (FOSC) were mobilized during current reporting period.

Response Updates

NRC1228960, Brook Forest Drive Mercury, Pensacola, Escambia County, Florida – On October 30, metallic mercury was released from a medical device inside a garage at a private residence. Florida Department of Environmental Protection (FDEP) requested EPA assistance with air monitoring and cleanup guidance. Florida FOSC Chris Russel was mobilized to assist FDEP. OSC Russell arrived on site and conducted air monitoring throughout the residence. Mercury vapor was found in excess of the Agency for Toxic Substances and Disease Registry's (ATSDR) recommended criteria for safe occupancy of private residences. The Homeowner requested EPA assistance with the cleanup and signed an Access Agreement and Notice of Federal Interest. Emergency and Rapid Removal Services (ERRS) and Superfund Technical Assessment and Response Team (START) contractors were mobilized to assist with remediation activities. **Update:** ERRS and START arrived on site and cleanup operations commenced. A vapor barrier was installed to segregate the garage from the living spaces. Crews are heating and venting the living spaces to remove built up mercury vapor. Gross removal of mercury and mercury contaminated debris is ongoing in the garage. The resident advised that at least 3 mercury devices were stored on site and were involved in the release. The residents have temporarily relocated with family until the cleanup is complete. Removal operations will continue through the weekend. For more information see response.epa.gov/brookforestdrivehq or contact FOSC Russell.
